## General Comment

I urge powers that be to ban and discontinue use of Glyphosate and associated fungicides, insecticides, and rodenticides. Use natural means and natural pests instead. The EPA is set up to protect the ENVIRONMENT. I have always been taught this so what is going on?

I am writing to say we need to review the safety and usage of toxins such as Glyphosate and associated fungicides, insecticides, rodenticide, etc. I am absolutely against usage of these toxic chemicals as they are being used today. We will not accept toxic chemicals on our food, in our water, in our children. Something has got to change. It was not always this way to use chemicals without regard. We know better, science knows better, our hearts know something is not right with our future generations and our planet health!

We need to listen to the scientists and other countries that are telling us there is a issue with these groups of toxic chemicals.

We owe this to our children, grandchildren and their children. Something is not okay with our health and brains in the USA. We should be a healthy country and we are letting government poison us through our food, water, and air. That same government can and will be the one to listen, change their mind, and protect us too. I believe there is good in the government.
